

# Ictal SPECT Injection

Under the provision of the *Health Professions Act of Alberta*, a regulated member who has completed advanced training, approved by Council, may be authorized by the Registrar under section 19(1) of the *Medical Diagnostic and Therapeutic Technologists Profession Regulation*. This section provides that a regulated member in one of the general registers may be authorized to perform restricted activities that are not authorized for their area of practice but that other members of the College are authorized to perform if:

- i. they have completed advanced training approved by Council, and
- ii. the Registrar is satisfied that the regulated member has received the appropriate education and has demonstrated the competencies required by the Council.

Under this legislation, electroneurophysiology technologists (ENPs) may complete advanced training in order to gain authorization to administer radiopharmaceuticals for diagnostic purposes.
