

Practice Standard

Intraoperative Monitoring (IOM) Authorization

Purpose

The Alberta College of Medical Diagnostic and Therapeutic Technologists (ACMDTT) is mandated by government to regulate the professions of medical radiation technologists (MRTs) and electroneurophysiology technologists (ENPs).

Accordingly, the College outlines specific standards relevant to the practice of the medical diagnostic and therapeutic technologist professions.

The purpose of a Practice Standard is:

- To outline for MRTs and ENPs, employers and the public the standards required for additional and enhanced practice authorizations
- To help identify areas of practice for MRTs and ENPs that require additional or enhanced practice authorizations
- To assist employers to use MRTs and ENPs to the full scope of their practice

Practice Standard

Electroneurophysiology technologists who have completed advanced training approved by Council may be authorized by the Registrar to perform intraoperative monitoring (IOM). Electroneurophysiology technologists, when performing IOM examinations, are authorized to perform the restricted activity of cutting a body tissue or administering anything by an invasive procedure on body tissue for the purpose of using needle electrodes.

The College will assess an individual's initial and renewal application for the practice authorization of IOM on their practice permit, by ensuring compliance with all of the following:

1. Confirmation of successful completion of the Certification Examination in Neurophysiologic Intraoperative Monitoring (CNIM) offered by the American Board of Registered Electroencephalographic and Evoked Potential Technologists (ABRET)
2. Annual confirmation the applicant has maintained competence in performing the additional restricted activities for renewal of authorization

An electroneurophysiology technologist is not permitted to perform IOM examinations without this authorization.
